

Export Safety Protocols - Fire Safety

Title	Description	Category	Status	Created At
Fire Guide	<p>Fire safety refers to the set of practices, precautions, and systems designed to prevent, detect, and respond to fires. It involves creating awareness, enforcing safety rules, and ensuring proper equipment is available in case of emergencies.</p> <p>Key points of Fire Safety include:</p> <p>Prevention – Avoiding fire hazards by following rules (e.g., no overloading of electrical outlets, safe storage of flammable materials).</p> <p>Protection – Installing fire alarms, extinguishers, sprinklers, and emergency exits.</p> <p>Preparedness – Conducting regular fire drills, training people on evacuation plans, and ensuring access to emergency numbers.</p> <p>Response – Knowing how to use extinguishers, activating alarms, and safely evacuating during a fire.</p> <p>Recovery – Reporting incidents, repairing damages, and strengthening future safety measures.</p>	Fire Safety	active	8/29/2025, 10:29:39 AM
